

I subscribe to XM Satellite and travel for a living. Currently I am able to access traffic and weather channels that provide me with instant information that allows me to be aware of threatening weather and traffic tie ups. This is part of the service I pay for and do not believe the government should pass yet one more law to limit the access of this service. I urge the FCC to reject NAB's petition 04-160 as it places unfair limitations on services that should be readily available if I choose to pay for it!
